

# TECH AND FACTS REPORT

—  
SCOTT AIRBAG BACKPACK  
LINE 2015/2016

*Nicolas Bibault,*  
**Ski Patroller,**  
**Compagnie du Mont-Blanc,**  
**Chamonix.**

“When the Ski Patrol at Chamonix trusts the Air Free AP 30 as part of their official wardrobe, you know it’s built with an unmatched level of quality construction and safety. A completely new inflation system and lightweight technical design makes this the next generation of avalanche packs.”

# ELEVATE YOUR SAFETY WITH SCOTT AND ALPRIDE

We develop, test and re-test in order to perfect our products over years and years. Our helmets, body protection and backpacks give you that extra bit of safety in those crucial areas of your body when it counts. Regardless where and how you ski, "ELEVATE YOUR SAFETY" with SCOTT - we've got you covered.

## FUNCTIONAL DESIGN

THE SCOTT AVALANCHE PACK, WITH ITS ERGONOMICALLY SHAPED BACKPLATE AND A PRE-SHAPED WAIST - AND SHOULDER STRAP, GUARANTEES THE BEST CONDITIONS FOR USE.

## KEY FUNCTIONS

The separate external avalanche pocket in combination with additional features, offers the perfect package for the best companion in the mountains.

## OPTIMAL POSITION

The system is strategically located in the lower portion of the bag to ensure optimal weight distribution and comfort.

## REMOVABLE AIRBAG SYSTEM

Not only does the light weight make it outstanding, but so does the simple handling and the quick reinstallation.

## AIRLINE TRAVEL FRIENDLY

Staying within the parameters of the International Air Transport Association (IATA), you can travel with this backpack by airplane.

# SCOTT AVALANCHE AIRBAG BACKPACK LINE

**D30® BACK PROTECTION PLATE**  
Integrated and removable

LET'S BE CLEAR, AIRBAGS ARE AN ESSENTIAL PART OF BACKCOUNTRY EXPLORATION. AT SCOTT, WE TOO BELIEVE SAFETY IS PARAMOUNT, WHICH IS WHY ALL OF OUR AIRBAG PACKS ARE EASY-TO-USE, TECHNOLOGICALLY ADVANCED, LIGHTWEIGHT, AND TRAVEL-FRIENDLY.

SCOTT AP 12 PRO

# SCOTT ALPRIDE AIRBAG SYSTEM

## SECURITY

### MORE SECURITY THROUGH SIMPLICITY.

A STOWABLE TRIGGER, ALUMINIUM SAFETY BUCKLES ON THE CHEST AND WAIST IN COMBINATION WITH LEG LOOP PROVIDE PROPER SECURITY IN THE EVENT OF AN AVALANCHE.

## LIGHTWEIGHT

### ONE OF THE LIGHTEST SYSTEM ON THE MARKET.

LIGHTWEIGHT, COMBINED WITH SIMPLE USER-FRIENDLY DESIGN, FAST REINSTALLATION, AND LOW COST, MAKE THESE SCOTT PACKS THE MOST ACCESSIBLE AIRBAGS EVER PRODUCED.

### AIRBAG

Resistant two layers of fabric ensure outstanding durability.

### LIGHT AND POWERFUL CARTRIDGES

The system is not only light and extremely small it is also very powerful. The light cartridges (440g) can fully inflate the 150L airbag in 3 seconds.

### INFLATION SYSTEM

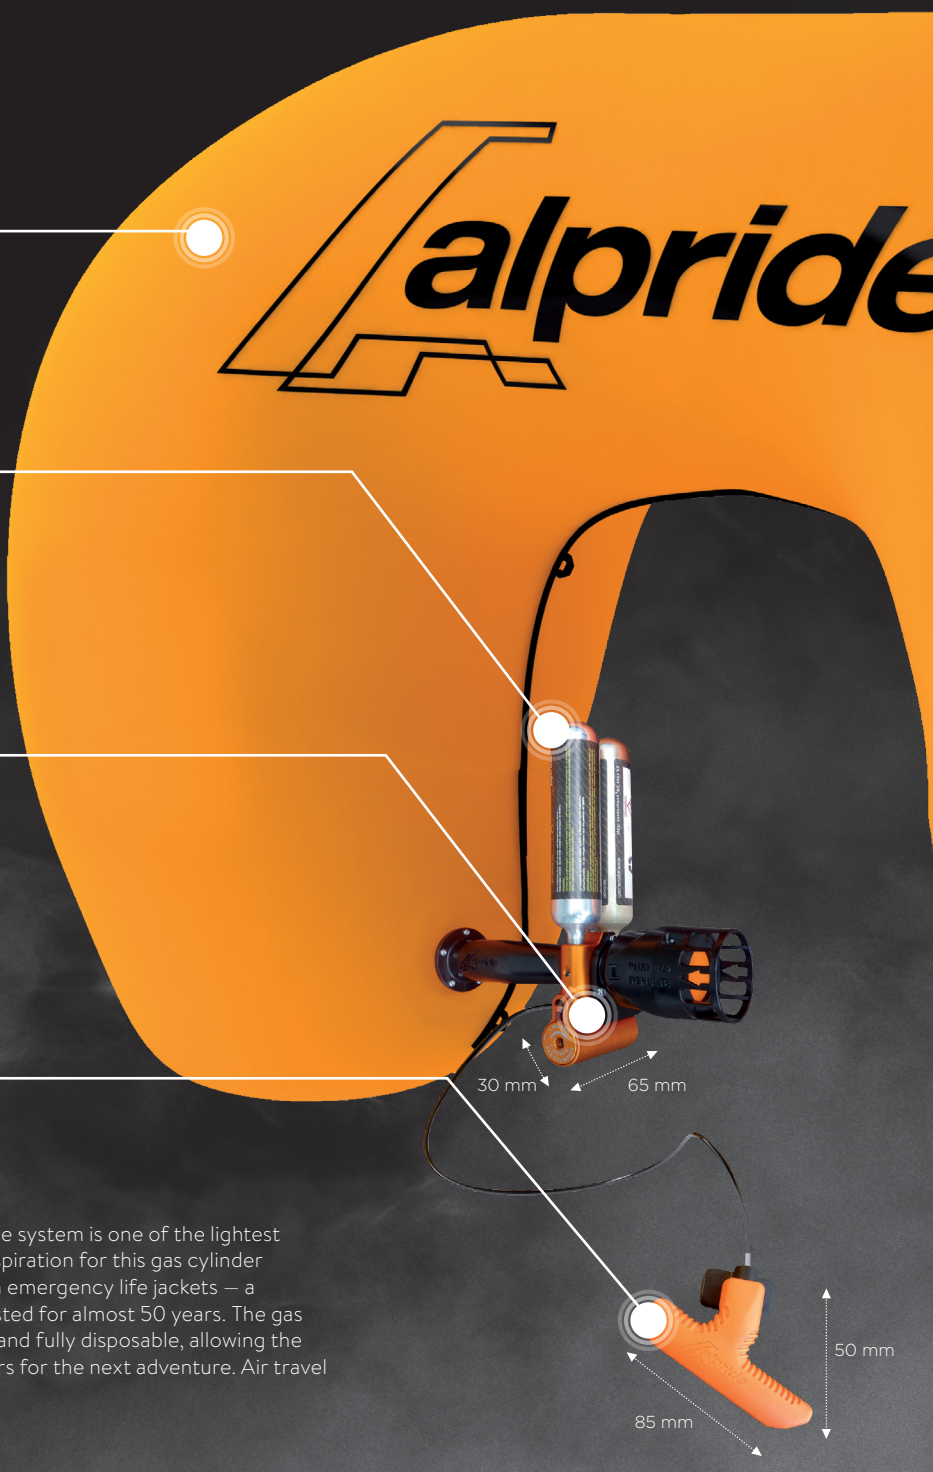

Anodized small inflation system: safer and lighter for the rider.

### TRIGGER

Small trigger to minimize the risk of involuntary release.

### SYSTEM

Weighing in at a mere 800 grams, the alpride system is one of the lightest avalanche airbag systems on the market. Inspiration for this gas cylinder system came from a similar design found on emergency life jackets — a maintenance free system that has been trusted for almost 50 years. The gas cylinders used in the system are affordable and fully disposable, allowing the user to quickly and easily install new cylinders for the next adventure. Air travel with these cartridges is approved by IATA.

# ALPRIDE - SWISS QUALITY

Alpride successfully transformed the same technology found in inflatable life vest, a system that proven its efficiency in the navy for more than 50 years, into an avalanche airbag.

## SWISS ENGINEERING: RELIABILITY & ROBUSTNESS

The device is made of only few key custom parts. This simple assembling of a limited number of parts reduce the risk of problems. Not explosive, no electricity: the handle pull a lever which release the spring. This spring releases the gas by punching the cartridges. Trials without cartridges are recommended to feel the strength of the handle system release. These trials can be repeated as many time as necessary. The system is fully integrated: handle+cable+inflator+airbag.

## LIFE JACKET'S STANDARD GAS CARTRIDGES

The gas cartridges are the lifejacket's standard. No maintenance, they are certified without leaks. And Flying with this type of cartridges is approved by IATA.

Once the airbag has been inflated, the gas cartridges has to be exchange with a set of full one. The gas cartridges are disposable; no refill, no deposit

## EFFICIENCY: 150 LITRES IN 3 SECONDS

The airbag's shape protect the back and the head of the user. Moreover, the rounded shape gives an optimal float efficiency on the avalanche. After inflation, the user can continue to ski with a complete field of vision.

A minimum of rules are required to pack the airbag inside the backpack but the packing is quick and easy. The power of the deployment is remarkable. The airbag system can be removed from one bag and inserted in another one within a couple of minutes.

Full quality control of the Alpride system for more safety on backcountries.

Premium CNC aluminium used for a lighter and even safer inflator system.

# SCOTT AIR FREE AP 12 PRO

THE NEW SCOTT AIR FREE AP 12 PRO IS THE PREFERRED AIRBAG OF PROFESSIONAL FREESKIERS AND FREERIDE COMPETITORS. A LIGHT AND COMPACT AVALANCHE PACK, THE AIR FREE AP 12 PRO OFFERS THE STAND-ALONE SCOTT ALPRIDE AIRBAG SYSTEM AS WELL AS AN INTEGRATED D3O® BACK PROTECTOR.

AIR FREE AP 12 PRO PACK

**Fabian Lentsch (AUT), SCOTT Freeski Athlete**

“For the last two seasons I have been riding in the SCOTT Freeride outfit. Now that the Vertic line will be increased up to three outfits I have even more choice to wear them in conditions for which they are made. I really like that the Vertic line is engineered with robust fabric, including a lot of technical features such as the ventilation system. At the same time, it keeps me warm and dry no matter how tough the conditions.”

The Vertic line is the first choice for several of our SCOTT Freeski Athletes, including Dane Tudor (USA), Phil Meier (SUI), Juan Bergada (ARG), Flory Kern (GER)

FIXATION

# SPECIFIC IMPROVEMENTS

## NEW ITW BUCKLES

WITH BETTER HANDLING, EVEN WHEN WEARING GLOVES

## BOTTLE HOLDER

IMPROVED FIXATION

# NEW SIZING CONCEPT, FOR AN EASIER CHOICE

NORMAL HEIGHT < 192CM

## NL = NORMAL LENGTH (UP TO ≈ 192 CM)

All SCOTT backpacks with the "NL" are designed to people with a height up to 192cm.

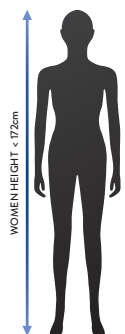

SHORT HEIGHT < 172CM

## SL = SHORT LENGTH (UP TO ≈ 172 CM)

The SL carry system is slightly shorter than that of SCOTT's standard packs. Consequently, the models in the SL series are the ideal choice for male users with shorter backs or women.

WOMEN HEIGHT < 172cm

## WL = WOMEN LENGTH (UP TO ≈ 172 CM)

Our packs are more than just pretty colors. SCOTT bags are engineered to fit women better with a shortened back length and distinct s-shaped women shoulder straps.

*All height measurements are approximations and should be used as a guide only!*

# AVALANCHE PACK PRICE OVERVIEW

AVALANCHE PACK

# FAQ

## HANDLING

### **How does the SCOTT ALPRIDE AIRBAG SYSTEM work?**

It's a cartridge inflator system that inflates the airbag.

### **What are the advantages compared to the other existing systems on the market?**

The Alpride system is extremely light and the cartridges are more affordable than the competition's products.

### **How long does it take to inflate the Airbag?**

Less than three seconds.

### **Are you allowed to travel with the airbag and the cartridges?**

Absolutely no problem. The IATA (International Air Transport Association) declares cartridges with less than 200 bars as not dangerous. The Alpride cartridges are like the type used on a life jacket. You are allowed to travel with 2 sets of cartridges for one pack. (for more information see: [www.iata.org](http://www.iata.org))

## TECH INFO

### **How many times can the cartridges be used?**

Just one time

### **Where can the cartridges be purchased?**

You can buy them in stores where SCOTT packs are sold.

### **What kind of gas is in the cartridges?**

CO2 and Argon

### **Is Argon dangerous?**

No, not at all. Argon is a noble gas that is used in diving as well as in the food industry.

### **How much pressure is in the cartridge?**

17.5 MPa.

### **How should the cartridges be stored?**

In a place that is protected from direct sunlight.

### **How long are they usable for?**

There is no expiration date. You can use them as long as the weight of the gas is in the range of - 10% of the nominal weight (printed on each cartridge), meaning at least 10 years or more.

### **As there are two different cartridges, does it matter in which position each cartridge is installed?**

Each cartridge has its own screw thread size, meaning it will only fit in its intended spot.

### **Once inflated, how can the system be deflated?**

Just push the valve flap on the inflator to release the air.

### **Is there a proper way to fold the bag back into the airbag pocket?**

Yes, the side parts of the airbag have to fold towards the top and the rest is folded like a "Z"- it is quick and easy to do. The proper procedure can be found on the airbag

## HOW IS THE AIRBAG INSTALLED?

1. Open the backpack
2. Slip the handle into the shoulder strap and fix the handle positions with the plastic clip on the webbing.
3. Take out the airbag from the inside through the hole into the airbag pocket. Open the zipper of the airbag pocket outside
4. Connect the four hooks of the airbag to the backpack
5. Get the zipper slider of the airbag pocket on the right side and close the zipper with the airbag put in
6. Fix the inflator with the Velcro strap and put the mesh cone over the inflator.
7. Screw the cartridges in.
8. Ready to use.

## HOW DO WE REACTIVATE THE SYSTEM ONCE USED?

1. Deflate the airbag
2. Fold the airbag back into the airbag pocket
3. On the inflator, screw the spring back so the indicator is no longer visible.
4. Replace the cartridges
5. Ready to use
